📘 Tutorial 2 — Delete Todos

> Continue the React + Firestore Todo series by adding delete functionality.

✅ What You Will Build

A todo list where each item has a **Delete** button that:

- Removes the item from Firestore
- Immediately refreshes the list in your app

🎯 Learning Goals

By completing this tutorial you will:

- Delete a specific Firestore document by ID
- Pass arguments from UI buttons into handlers
- Keep React state in sync with Firestore data

🧰 Before You Start

You should already have:

- Tutorial 1 completed
- A working `todos` collection in Firestore

Run your app first to confirm your baseline works:

```
npm run start
```

Part 1 — Update Imports in `Todo.js`

Open:

```
src/components/Todo.js
```

Change your Firestore import from this:

```
import { collection, addDoc, getDocs } from "firebase/firestore";
```

To this:

```
import { collection, addDoc, getDocs, deleteDoc, doc } from
"firebase/firestore";
```

Part 2 — Add a Delete Handler

Inside your `Todo` component, add this function below `addTodo`:

```
const deleteTodo = async (id) => {
  await deleteDoc(doc(db, "todos", id));
  fetchTodos();
};
```

✅ This targets one document in the `todos` collection using its `id`.

Part 3 — Add Delete Buttons in the UI

Find your `.map()` render block.

Replace:

```
{todos.map((t) => (
  <p key={t.id}>{t.todo}</p>
))}
```

With:

```
{todos.map((t) => (
  <div key={t.id} className="todo-row">
    <p>{t.todo}</p>
    <button className="btn delete-btn" onClick={() => deleteTodo(t.id)}>
      Delete
    </button>
  </div>
))}
```

Part 4 — Add Small Style Improvements

Open:

```
src/App.css
```

Add:

```
.todo-row {
  display: flex;
  justify-content: space-between;
  align-items: center;
  gap: 1rem;
  margin-bottom: 0.75rem;
}

.delete-btn {
  background: #8b1e1e;
}
```

Part 5 — Test It

1. Add 2–3 todos
2. Click **Delete** on one item
3. Refresh the page

You should see:

✅ Deleted item disappears immediately ✅ Deleted item does not come back after refresh

---

🛠️ Common Errors

❌ `deleteDoc is not defined`

You forgot to import `deleteDoc`.

❌ Wrong document deleted (or no deletion)

Make sure you call:

```
deleteDoc(doc(db, "todos", id))
```

… and that `id` is `t.id` from the `.map()` item.
